Subject: 72/73?

This is probably one of the dumbest questions you will hear but.....
Being new to the list and getting very interested in qrp operations,
why 72 instead of 73? No doubt something to do with qrp but.....
WHY 72?
Sounds cool to me...
72.....Phil KD8UX.....73

I like the part about getting laid! Works for me! After a hard day at work (in a maximum security prison) my additude needs some readjustment, and I have long ago given up booze. QRP is almost as good as sex. Try it (qrp, that is) you might like it!

Dear Peter,

First, one may notice that there are many on this list whose "significant other" may not be a girl. These folks could be expected, in some cases, to take offense at your suggestion.

Second, one should question what on earth this has to do with QRP? Maybe it is the situation where one may not be as gifted as others and is trying to "do more with less". ;-)

Write on, Larry!!!

Your comments were "right on". I was amazed at the negative comments I received from a posting about the fella in Fla who was running 5 watts to a set of stacked 5 element monobanders at 60 & 90 feet during the SSB Sweepstakes. I got the distinct feeling that there are some on this list who feel that QRP should be done with homebrew gear (bailing wire and bubblegum wrappers), underground antennas and solar panels during a full moon!

Subject: Dan's Small Part & Kits..stop!

Gang please stop the rumors!!!!
Don't ASSUME (you know the saying...don't you?).

I can't confirm Dan's status as of today but less than 3 weeks ago he

generously sent a couple of donations for our Dayton QRP Banquet and more importantly asked me to start a name/address list of those wanting to receive his Catalog #3 due out in June. He asked that I mail him that list after Dayton. Now things could have changed but until someone gets verbal or written confirmation from Dan himself I would think it is a bit premature to bury him.

This was the address he sent me to return the list to:
Dans Small Parts and Kits
1935 So. 3rd West No. 1
Missoula, MT 59801

You placed an order with Dan's and then cancelled the check based on a rumor?

Being a small business owner myself, let me assure the group that one of the best ways to convince a business owner to shut down is to send orders and then have the checks bounce. Not only does it cost the business owner a small bank fee, but it also introduces just enough frustration that he/she might just decide to stop selling to the public-at-large and sell off their inventory to people who he/she can trust.

This might be a novel suggestion, but how about someone placing an order with him and include a question about whether he is shutting down or not? If things really are being returned, then we know the answer. In the mean time, let's not jerk the guy around and cancel orders on him.

Please, no flames. This is just a simple suggestion.

How about some technical items on the list for a change?

I am looking for a Delta-Sigma modulator IC. Does anyone know of a source.

Does anyone know how the 1-bit A/D converters work in the CD players? Are these actually Delta-Sigma chips ?

My application requires that a very low level slowly varying DC (less than 1 khz) voltage be converted to Analog (less than 500 khz) for processing. I want to do this in hardware, hopefully one chip.

Subject: Mizuho on 20
Message-Id: <Pine.SOL.3.91.950408155017.19784B-100000@ocean>

I picked up a ProAm 20 metre whip at a Hamfets this morning, put it on
the car, tuned it roughly and called V01TK. He came right back with a
529 but copied all my info Q5. The amazing thing was that he could copy
my fist using the silly little button on the Mizuho and no sidetone.

I really need a small keyer and a ** small ** paddle for /P. How about
it NorCal or NE QRP? That is the kit I'd most like to see ... a neat set
of QRP paddles and a simple keyer to go with them, including sidetone.

On the tribander I've worked CT and VE4 on sideband so the Mizuho is more
than a toy.

Now to find time to get on the ARCI test.

Jim

How about a capacitive touch iambic paddle with built in keyer ?

Sounds like a perfect QRP project, using CMOS chips for Extra low current consumption. for portable use, capacitive paddles means no moving parts to adjust or break. just strap it on the radio and go.

You could buy the CMOS-2 keyer kit for 45 bucks (complete info in the ARRL handbook) and make the paddles out of aluminum. just need the touch circuit. The Heathkit Micro-matic memory keyer used capacitive paddles. so the circuits in there.

Quick, somebody put on the theme music to "Mission Impossible"

Well, gang. I did a prop cut at 0218Z this morning and the NBS says that we have a major storm underway. The flux was 71, A Index was 46 and the K Index was 4! Looks like a fun day for QRP!

Well, it was a GIFT from Bill Hickox at Tejas. He said it didn't have the
IC, so I finally got around to building it and now I need the chip. The
price was right!

Subject: tx/key

Hi,
has anyone ever heard of building a qrp transmitter right on a straight key?
I have been building some keys and paddles lately and am interested in
doing a project like that. Anyone have ideas on where i can get a very
small kit or design for such a thing. I think a whole transceiver may be
unrealistic, but a tx seems to be possible for sure.
